Engineered Wood Products for Builders and Specifiers

Providing clients with construction services for their developments can be demanding. At Donaldson Timber Engineering we understand the building business - we've been suppliers of engineered wood products for over 30 years and are one of the biggest in our sector, with 7 factories UK wide.

We manufacture a comprehensive range of timber roof and floor products, all made from sustainably sourced timber, all designed to make life easier and safer for the builder.

DTE... working harder to make your project easier

ROOF PANELS

DTE's Roof Panels provide an easy to erect 'room in the roof' system. Incorporating SIPs panels, roof trusses, cassette floors, and excluding purlins, Roof Panels are quick to build saving up to 80% on erection time. They suit a variety of roof shapes; achieve long spans; meet all required insulation values; provide up to 25% more floor space; and can be used with masonry, steel and timber frame.

SPANDREL PANELS

Spandrel panels are structural timber frame panels made to the profile of the roof, forming the party and/or gable walls. Supplied and installed with the roof trusses, spandrels provide a dividing wall, suitable for all standard forms of construction. They provide a time saving alternative to building up masonry walls.

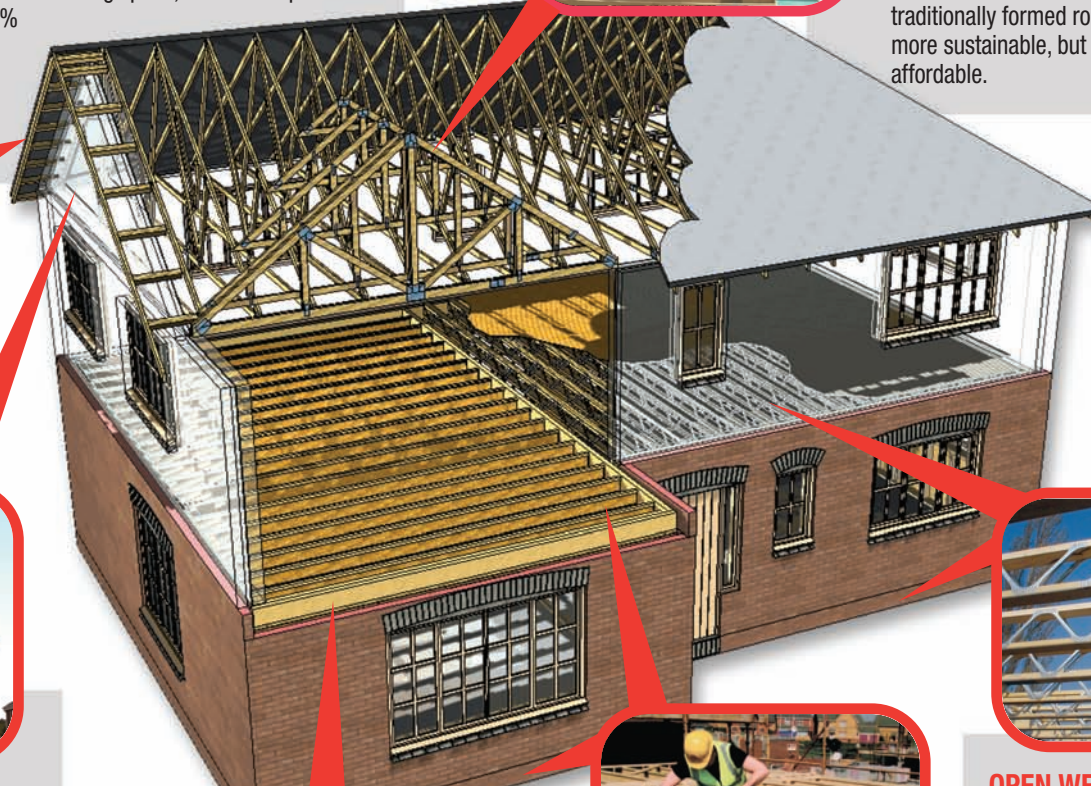

FLOOR PANELS

A prefabricated modular floor system which improves speed and safety during the build process.

ROOF TRUSSES

Roof Trusses provide a structural frame for roof support. They deliver a flexible, practical, simple-to-erect engineered solution to roofing requirements. As they can use up to 40% less timber than a traditionally formed roof, they're not only more sustainable, but can be more affordable.

OPEN WEB JOISTS

Combined timber and steel joists with an open web design, Open Web Joists eliminate costly cutting and drilling when installing services, including Mechanical Ventilation and Heat Recovery systems. They provide a popular alternative structural flooring system with the advantages of timber, and add flexibility to the construction process.

I-JOISTS

I-joists are factory engineered from low, uniform-moisture timber and virtually eliminate floor movement, splitting and warping. Available in up to 14m lengths, I-joists can be delivered cut to size.

SUSTAINABLY SOURCED TIMBER

Certified timber is one of the most environmentally-sound standard building materials available, and can significantly reduce the environmental impact of construction - particularly when compared to other building products.

Wood also has the best thermal insulation properties of any mainstream construction material, a major bonus when aiming for warmth and efficiency.

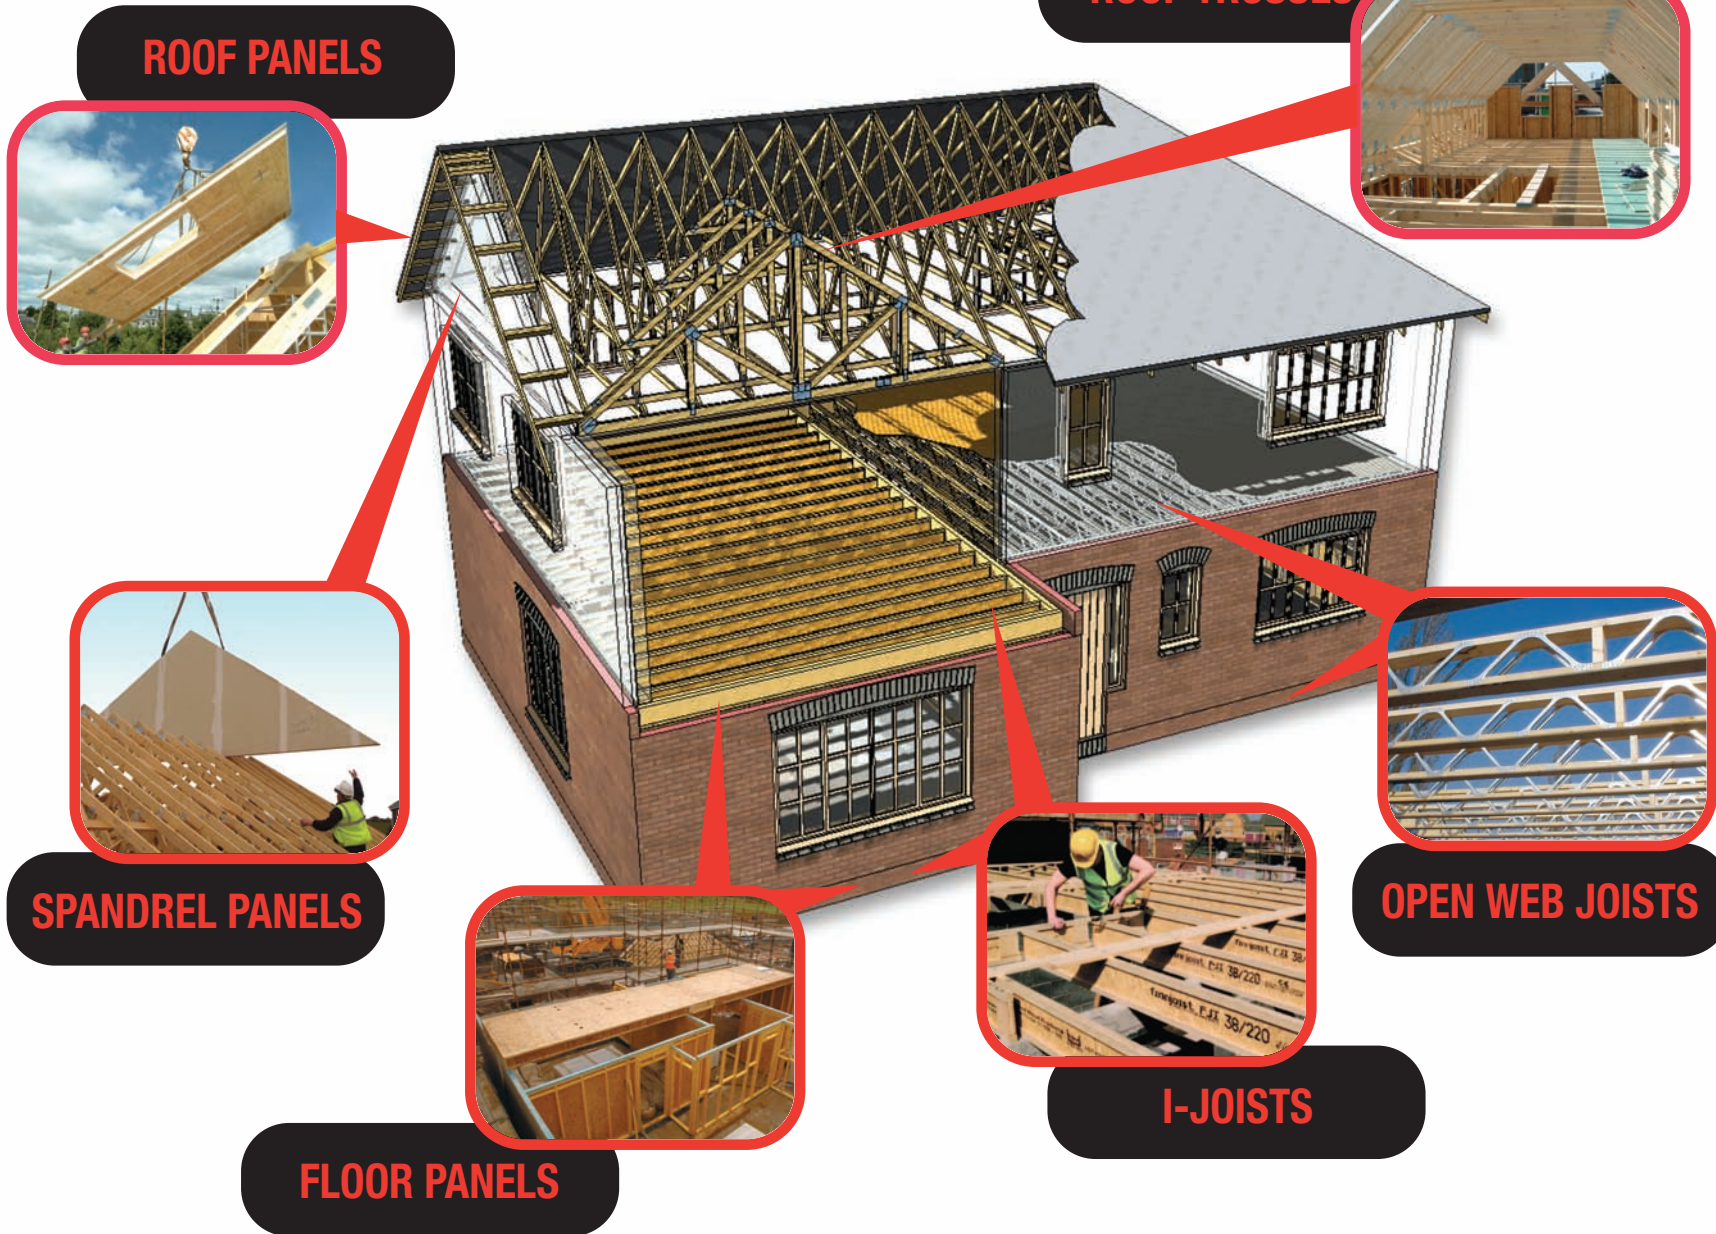

OFFSITE CONSTRUCTION

All DTE products are factory manufactured and cut to size, so construction is simpler and on-site waste is kept to a minimum.

- Saves time and cost
- Reduces waste
- Makes building easier

Building your dream home? ...then let DTE give you a helping hand

Building your own home is exciting... and challenging! There's a lot to think about - the plot, the finance, the design, the construction methods, the permissions.

Whichever method you choose for building your new home, timber frame or masonry, choosing timber roof and floor systems can make a big difference to the sustainability, speed and efficiency of your project.

Donaldson Timber Engineering, one of the UK's largest and longest established manufacturers of engineered wood products, can help you, and your designer, make the right choices.
